### Acknowledgment

I certify that the information provided on this form is accurate, and I agree to the Terms and Conditions

Terms: Upon submitting samples to the American Salers Association (ASA), the submitting party conveys ownership of the sample to ASA. The submitting party agrees and acknowledges that ASA intends to perform genetic testing on the submitted sample in an effort to describe the animal's genetics. The submitting party further agrees and acknowledges that it assumes all risks that are associated with the genetic testing results and any associated implications. ASA has the right to make any results determined through the genetic testing publicly available. Not every genomic test results in genomically enhanced EPDs. The IGS Multi-breed Genetic Evaluation analyzes the genotype data and removes genomic files with suspected errors from the genetic evaluation. Errors could include incorrect international ID, sex and/or parent or progeny markers not matching to name a few. ASA shall not be held responsible for damages of any kind, including but not limited to, lost profits, lost value of progeny, lost value of embryos and/or semen, interruption of businesses that may arise from the publication of genetic testing results. The term 'submitting party' shall mean any ASA member/customer submitting a DNA sample and test request, as well as any ASA member/customer submitting a DNA test request for a DNA sample that is already on file with the ASA.
